

# Remote Commissioning

## Even when the whole world is on lockdown WVK finds a way out!

During the Covid-19 pandemic, one of our customers needed to commission his new WVK hydropower station. Due to the worldwide travel restrictions, it was not possible for our engineers to fly and perform the commissioning. Thanks to our state-of-the-art remote access technologies, our engineers guided the commissioning via video conference from Germany.

This 3-jet horizontal Pelton unit, with a power output of 6.7 MW, is now successfully operating without restriction. In the near future, the customer will expand his powerhouse installing a second WVK unit, which will increase the power output to 10 MW.

WVK did what seemed impossible! You can place your trust on us!  
For our valuable customers, we find solutions even in the most challenging situations!

"Remote-working with WVK DURING THESE TIMES OF A PANDEMIC was a different and unique experience. The whole job was dealt with in an efficient and timely way, counting with the support of the engineers from Germany".
